Landholders are encouraged to familiarise themselves with the Acts and regulations relevant to their operations, and to seek advice from the department if required.
Glossary

The following list of technical terms and their definitions are essential to understanding the accepted development vegetation clearing code (code). Where used in the text, the terms are italicised and bold. All other terms in the text that are italicised and bold, and are not included in the below table have the meaning provided for in the *Vegetation Management Act 1999*.

<table>
<thead>
<tr>
<th>Term</th>
<th>Definition</th>
</tr>
</thead>
</table>
| **Broadacre cropping**| Is the commercial cultivation and harvest of:                                                                                         
|                       | - sugar cane and tea                                                              
|                       | - plants for oil, such as canola, mustard and sunflower                          
|                       | - plants for fibre, such as cotton and hemp                                        
|                       | - cereal or pseudo cereal plants such as (including any forage varieties): wheat, rice, barley, oats, rye, chia, triticale, sorghum, quinoa, maiz and millets  
|                       | - pulses or leguminous plants such as: lupins, chickpeas, cowpea, faba beans, field peas, mung beans, navy beans, soybeans, lentils, peanuts, guar, dolichos and lucerne.  
|                       | Note: Does not include growing pasture to be grazed by livestock.  |
| **Defining bank**     | Is the bank that confines the seasonal flows, but which may be inundated by flooding from time to time, and can be either:  
|                       | - the bank or terrace that confines the water before the point of flooding          
|                       | - where there is no bank, the *seasonal high water line* that represents the point of flooding.  |
| **Ecological processes** | Is the range of natural processes which maintain an ecosystem, including but not limited to:  
|                       | - hydrological processes                                                           
|                       | - soil development                                                                
|                       | - nutrient cycling                                                                
|                       | - chemical processes including storage of nutrients                              
|                       | - decomposition and cycling of organic matter                                     
|                       | - pollination and seed production                                                 
|                       | - seed dispersal                                                                  
|                       | - predator-prey relationships                                                     
|                       | - germination and recruitment of species                                          
|                       | - the carbon cycle and stability of atmospheric carbon                            
|                       | - habitats for flora and fauna (such as particular *regional ecosystems*, logs, rocks, debris, leaf litter, nectar, hollow bearing trees, food and shelter). |

1 A list of terms defined in the *Vegetation Management Act 1999* is available in the General guide to the vegetation clearing codes: Accepted development vegetation clearing codes.
<table>
<thead>
<tr>
<th>Term</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Existing cropped area</strong></td>
<td>Is an area that has been cropped or harvested for annual or perennial <em>horticulture</em> or <em>broadacre cropping</em>, at least three times in the ten year period prior to notification under this code.</td>
</tr>
<tr>
<td><strong>Horticulture</strong></td>
<td>Is the commercial cultivation of plants for harvesting including fruits (e.g. berries, grapes and nuts), vegetables, flowers, stems, roots or leaves, and commercial cultivation of turf grass species for turf harvesting.</td>
</tr>
<tr>
<td><strong>Island</strong></td>
<td>Is any mapped <em>regulated vegetation</em> that is less than 10 hectares in size and is further than 200 metres from any other <em>regulated vegetation</em>. This includes ‘islands’ that are within or straddle lot boundaries.</td>
</tr>
<tr>
<td><strong>Landholder</strong></td>
<td>Is (where relevant):</td>
</tr>
<tr>
<td></td>
<td>• the registered proprietor of <em>freehold</em> land</td>
</tr>
<tr>
<td></td>
<td>• a lessee of <em>freehold</em> land, subject to the consent of the <em>freehold</em> owner to make a notification</td>
</tr>
<tr>
<td></td>
<td>• a lessee of a lease under the <em>Land Act 1994</em> provided that the <em>clearing</em> is consistent with the purposes of the lease</td>
</tr>
<tr>
<td></td>
<td>• a sub-lessee of a lease subject to the consent of the lessee to make a notification and provided that the <em>clearing</em> is consistent with the purposes of the lease</td>
</tr>
<tr>
<td></td>
<td>• a licensee or permittee under the <em>Land Act 1994</em> provided that the <em>clearing</em> is consistent with the conditions of the licence or permit</td>
</tr>
<tr>
<td></td>
<td>• the holder of the title or tenure to the land.</td>
</tr>
<tr>
<td><strong>Note</strong>: For the purposes of section 3 of this code, a reference to a landholder includes a reference to a third party who has notified to clear under this code in accordance with section 2 of this code.</td>
<td></td>
</tr>
<tr>
<td><strong>Landholder consent</strong></td>
<td>Is any of the following:</td>
</tr>
<tr>
<td></td>
<td>• A written agreement between a third party and a landholder to enter, access and undertake <em>clearing</em> or other works on the land.</td>
</tr>
<tr>
<td></td>
<td>• Another power or permit provided under a State, Commonwealth or Local law for an officer or an entity to enter, access and undertake <em>clearing</em> or other works on the land.</td>
</tr>
<tr>
<td><strong>Land zones</strong></td>
<td>Are categories that describe the major geologies, associated landforms and geomorphic processes in Queensland. The <em>land zone</em> can be identified by the middle number in the three digit regional ecosystem identification code. For example, the <em>regional ecosystem</em> identified by the code 12.3.4 is in <em>land zone</em> 3.</td>
</tr>
<tr>
<td><strong>Recognised best practice methods</strong></td>
<td>Is a method recognised by a State or Federal government agency to prevent increased <em>soil erosion and instability</em>, stabilise <em>soil erosion and instability</em> and prevent increased sediment run-off. This includes a guide such as the <em>Soil Conservation Guidelines for Queensland (3rd edition)</em>, a fact sheet or other advice published or provided by a State or Federal government agency.</td>
</tr>
<tr>
<td>Term</td>
<td>Definition</td>
</tr>
<tr>
<td>------------------------------------------------</td>
<td>------------------------------------------------------------------------------------------------------------------------------------------</td>
</tr>
<tr>
<td>Regulated vegetation</td>
<td>Is a category A area, category B area, category C area or category R area.</td>
</tr>
<tr>
<td>Salinity expression area</td>
<td>Is an area containing more than one of the following salinity indicators:</td>
</tr>
<tr>
<td></td>
<td>• Plant species tolerant of saline conditions, shallow water tables or poor drainage (waterlogging)(^2)</td>
</tr>
<tr>
<td></td>
<td>• Wet areas in lower parts of the landscape or bare soil (soil scalding)</td>
</tr>
<tr>
<td></td>
<td>• Dieback of larger trees in low, wetter parts of the landscape (outside drought conditions or the effects of fire)</td>
</tr>
<tr>
<td></td>
<td>• Salt accumulations on the surface (often white and powdery, sometimes crystalline)</td>
</tr>
<tr>
<td></td>
<td>• Areas of shallow groundwater(^3)</td>
</tr>
<tr>
<td>Seasonal high water line</td>
<td>Is a zone that represents the usual peak seasonal flow level and can be identified by deposition, debris or characteristic vegetation zonation.</td>
</tr>
<tr>
<td>Soil erosion and instability</td>
<td>Is the occurrence of gully erosion greater than 30 centimetres in depth, landslips, a scarp, soil scalding or stream bank slumping.</td>
</tr>
<tr>
<td>Superseded code</td>
<td>Is the ‘Managing clearing to improve operational efficiency of existing agriculture’ (dated 2 December 2013) accepted development vegetation clearing code.</td>
</tr>
</tbody>
</table>

\(^2\) For example—Melaleuca spp. (in particular Melaleuca bracteata and Melaleuca quinquenervia), Sporobolus spp. (in particular saltwater or marine couch), Salsola australis (soft roly-poly), Sclerolaena spp. (in particular prickly roly-poly), Cyperus spp. (sedges), Juncus spp. (rushes), Atriplex spp. (saltbushes), Chloris spp. (Rhodes grasses), Cynodon dactylon (common couch), Enchylaena tomentose (ruby saltbush), Sesuvium portulacastrum (purslane), Tecticornia species (samphires), Phragmites spp.

\(^3\) A water table less than 5 metres from the surface would generally be considered as shallow for this purpose. One mechanism to identify this is from a nearby bore.
1 Introduction

The Vegetation Management Act 1999 (the Vegetation Management Act), in conjunction with the Planning Act 2016 (the Planning Act) and subordinate legislation, regulates the clearing of remnant vegetation and regulated regrowth vegetation. This code, which was made by the Minister on 5 June 2019 (effective 21 June 2019) in accordance with section 19O of the Vegetation Management Act and the State Policy for Vegetation Management, is approved as an accepted development vegetation clearing code under part 2, section 3 of the Vegetation Management Regulation 2012.

Clearing in accordance with this code qualifies as exempt clearing work under schedule 21 of the Planning Regulation 2017.

Note: Other legislation may also affect clearing activities. Before you notify the Department of Natural Resources, Mines and Energy (DNRME) of your intention to clear vegetation under this code, it is strongly recommended that you contact the relevant agencies listed in Appendix 1 to determine whether your proposed clearing activity is allowable under other local, state and federal laws.

1.1 Purpose

The purpose of this code is to regulate the clearing of remnant (category B areas) and regulated regrowth vegetation (category C areas and category R areas) to improve agricultural efficiency in accordance with requirements designed to meet the objectives outlined in section 1.3.

If clearing to improve agricultural efficiency does not comply with all of the requirements of this code, it is classified as either assessable or prohibited development under the Planning Act and may be subject to the relevant offence provisions.

Note: All sections of this code are mandatory and to ensure you are compliant with this code, you must satisfy the requirements in all sections.

1.2 Scope

This code applies to the clearing of vegetation in category B, category C or Category R areas that are on any of the following:

- Freehold land
- Indigenous land
- Leasehold land granted under the Land Act 1994 (Land Act) for agricultural and grazing purposes

DNRME uses satellite imagery to monitor compliance with vegetation management legislation.
Clearing to improve agricultural efficiency, Department of Natural Resources, Mines and Energy, 2019

- Land subject of an occupation licence under the Land Act

This code does not apply to:

- **clearing** on land that is not freehold or indigenous land, leasehold land granted under the Land Act for agricultural and grazing purposes, or land that is the subject of an occupation licence under the Land Act
- **clearing** that is inconsistent with a condition of a development approval that remains enforceable
- **clearing** for which an approval is otherwise required under the Planning Act, such as a material change of use approval
- **clearing** in an endangered regional ecosystem or an of concern regional ecosystem.

### 1.3 Objective

The objective of this code is that **clearing** to improve agricultural efficiency achieves the following environmental outcomes:

- Avoids and minimise impacts on remnant vegetation and regulated regrowth vegetation
- Prevents land degradation
- Maintains ecological processes and biodiversity
- Maintains bank stability, water quality and habitat of wetland, watercourse and drainage features
- Maintains regional ecosystems.

### 1.4 Commencement date

This code became effective on 21 June 2019, replacing the following superseded code:

- Managing clearing to improve operational efficiency of existing agriculture (2 December 2013)

From the commencement date of this code, notifications made under this superseded code are no longer valid.

Note: Even if you have been clearing native vegetation to improve operational efficiency of existing agriculture under the superseded code, to continue to clear you will need to notify under this code and comply with the requirements of this code.
1.5 Assistance

Queensland Government staff are available to help landholders meet their obligations so if – after reading this code – you have questions or want to make sure you are doing the right thing, contact DNRME by calling 135 VEG (135 834) or emailing vegetation@dnrme.qld.gov.au.

2 Notification requirements

Before any clearing is undertaken under this code, DNRME must be notified of your intended clearing activity by either of the following:

1. the landholder\(^5\)
   or
2. a third party\(^6\).

\[\text{Note: If you are a third party making a notification over someone else’s land, you need landholder’s consent to enter, access and undertake clearing or other works on their land.}\]

2.1 Notification process

1. Acquire the authorisation or consent of the landholder to notify, where required.
2. Complete the online or hard copy notification form, which requires that you provide certain information, including:
   a. contact details
   b. the lot on plan on which the activity is proposed
   c. the tenure of the property (i.e. whether freehold, leasehold or other)
   d. information that clearly identifies the location of the intended clearing.
3. Lodge the completed form with DNRME.
4. Receive confirmation of your notification from DNRME before commencing clearing.

\[\text{Note: If you are notifying online, you should receive an email within 10 minutes that confirms receipt of your notification.}\]

\(^5\) This includes a person authorised to notify on the landholder’s behalf, such as someone who holds a power of attorney.

\(^6\) For example, a landholder seeking to clear on a neighbour’s property.
2.2 Notification limitations

1. A notification is limited to a single lot.
2. If your property consists of more than one lot, you may lodge a notification for each lot.
3. A notification remains in effect for two years from the date of confirmation.\(^7\)
4. Once a landholder reaches the maximum clearing limit under section 4.2 of this code (or the superseded code), no further notifications can be made by the landholder and no further clearing can be undertaken on the lot under this code.

Note: If you have previously cleared 10 hectares or more on your lot to improve agricultural efficiency under the superseded code, no further clearing is permitted under this code.

3 Compliance requirements

To comply with this code, you must:

1. notify DNRME in accordance with the notification requirements (section 2 of this code)
2. conduct your clearing in accordance with all of the clearing requirements (section 4 of this code)
3. keep the following records if you have contracted another person to undertake the clearing on your behalf, and make these records available to DNRME upon request:
   a. contractor details (name, address, contact details)
   b. instructions to contractors, detailing location, date and time.

4 Clearing requirements

Clearing can only occur if it is undertaken in accordance with all requirements in sections 4.1 to 4.3.

4.1 Operational efficiency

Clearing must only be undertaken under this code where either of the following are satisfied:

1. The clearing is to:
   a. straighten edges or margins of an existing cropped area
   b. provide for installation of irrigation systems or maximising efficiencies of existing irrigation systems, within or adjacent to an existing cropped area.

\(^7\) Notifications do not transfer on title. If you have recently purchased the property and intend to undertake clearing activities in regulated regrowth vegetation or remnant vegetation, you must first notify DNRME.
Example 1: You would like to clear the vegetation around an existing cropped area. One margin of the cropped area is not straight. The opposite margin is straight. You would like to clear vegetation along both margins to expand the cropped area. You are only permitted to clear vegetation along the margin that is not straight, to straighten it (or to provide for the installation or maximisation of irrigation systems).

4.2 Clearing limits

1. Clearing must not occur in:
   a. endangered regional ecosystems
   b. of concern regional ecosystems
   c. essential habitat
   d. a riparian protection zone specified in Table 1
   e. an island.

2. For each lot, clearing must not exceed any of the following area limits:
   a. 5 hectares in category B areas combined in total under this code or the superseded code
   b. 1 hectare in category R areas
   c. 10 hectares of category B areas, category C areas or category R areas combined in total under this code or the superseded code.

Example: You have an existing cropped area that does not have straight edges — there is native vegetation which prevents your irrigation equipment from evenly distributing water across the cropped area — and you did not clear under the superseded code.

The native vegetation you would like to clear to improve agricultural efficiency is comprised of 2 hectares of a category B area, 5 hectares of a category C area and 0.5 hectares of a category R area. Because the proposed clearing is less than 5 hectares in the category B area, less than 1 hectare in the category R area and less than 10 hectares in combined total, if you comply with all other requirements of this code, you may clear to straighten the edge of the existing cropped area.

---

8 This includes clearing under this code for agriculture by a former landholder.
Table 1: Riparian protection zones

<table>
<thead>
<tr>
<th>Water feature</th>
<th>Riparian protection zone*</th>
</tr>
</thead>
<tbody>
<tr>
<td>Wetland</td>
<td>100 metres</td>
</tr>
<tr>
<td><strong>Watercourse and drainage features</strong></td>
<td></td>
</tr>
<tr>
<td>Stream order† 1 or 2</td>
<td>10 metres</td>
</tr>
<tr>
<td>Stream order† 3 or 4</td>
<td>25 metres</td>
</tr>
<tr>
<td>Stream order† 5 or more</td>
<td>50 metres</td>
</tr>
</tbody>
</table>

**Notes:**
* The riparian protection zone includes the area between the **defining banks** of the **watercourse, drainage feature** or **wetland**, plus the specified distance measured from the **defining bank** away from the water body.
† Stream order is shown on the vegetation management supporting map.

4.3 Soil and water quality protections

When clearing, all of the following apply:

1. **Recognised best practice methods** must be employed to:
   a. prevent increased **soil erosion and instability** resulting from the clearing
   b. stabilise **soil erosion and instability** which has resulted from clearing
   c. prevent increased sediment run-off entering a **wetland, watercourse or drainage feature** as a result of the clearing.

2. **Clearing** must not occur within either of the following areas:
   a. 100 metres of a **salinity expression area**
   b. In **land zone** 1, 2 or 3 where the elevation is less than five metres above sea level.

<sup>9</sup> In Queensland, all plants that are native to Australia are protected plants under the *Nature Conservation Act 1992*, which endeavours to ensure that protected plants (whether whole plants or protected plants parts) are not illegally removed from the wild, or illegally traded. Prior to clearing, you should check the flora survey trigger map to determine if the clearing is within a high-risk area by visiting [www.des.qld.gov.au](http://www.des.qld.gov.au). For further information or assistance on the protected plants flora survey trigger map for your property, please contact the Department of Environment and Science on 13QGOV (13 74 68) or email palm@des.qld.gov.au.

<sup>10</sup> Contact the Department of Agriculture and Fisheries before clearing:
- any sandalwood on state-owned land (including leasehold land)
- on freehold land in a ‘forest consent area’
- more than five hectares on state-owned land (including leasehold land) containing commercial timber species listed in parts 2 or 3 of Schedule 6 of the Vegetation Management Regulation 2012 and located within any of the following local government management areas - Banana, Bundaberg Regional, Fraser Coast Regional, Gladstone Regional, Isaac Regional, North Burnett Regional, Somerset Regional, South Burnett Regional, Southern Downs Regional, Tablelands Regional, Toowoomba Regional, Western Downs Regional.

Clearing to improve agricultural efficiency, Department of Natural Resources, Mines and Energy, 2019
