Subject: Self-assessable veg codes

Hi Matt,

Al just informed me that you want the self-assessable veg clearing codes to send to the Prem's office. I just want to clarify which codes you wanted.

- Thinning and fodder harvesting codes which have been endorsed by the herbarium and are ready for approval?
- The encroachment code that has been endorsed by the herbarium and is ready for public consultation?
- Remaining 8 codes which have been drafted but are still waiting for endorsement from the herbarium before public consultation?

Regards

Hi again Matt,
Fodder and Thinning codes attached.

We have not set a date for public consultation as we have been waiting for approval to release from Min. Last year, the thinning and fodder codes were sent to the DP's office for endorsement prior to release for public consultation. I have also attached the encroachment code in case you want to send it as well.

Regards
Peter

Hi Matthew,

About 65% of the 2015-16 SLATS clearing rate was category X. The figure you need to look at in the report is the clearing rate of non-remnant vegetation (257,000 ha/yr). This will be close to the category X rate. The remnant clearing rate (138,000 ha/yr) equates to Category B on our veg maps.

We haven't received the veg map category breakdown of the figures from DISTI yet but they will be pretty close to the figures above.

Peters,

Was just after a quick break down of veg clearing by category.

As in Cat x is X% of total clearing etc.

I'm looking through the last slats report and can't seem to find them in there but I freely admit it was a pretty half baked look.

Hi Matt,
DSITI has done some further analysis for us. Do you know what EHP are after so we can see if we have the info?

I just had a call from someone in EHP chasing the breakdown of SLATS clearing rates in category X on PMAVs and category X on the Regulated Veg Map. The difference is that the category X on PMAVs has been 'locked in' by landholders.

If you can let me know I will follow up.

Hi see attached Table around veg regulation timing options.

I think it is pretty clear the second week in January gives us better system security, more area under protection, avoids the "look " of a Xmas eve issue, and has relatively low risk of substantive additional clearing occurring.

I have highlighted the key bits, ta Al

Published on DNRME Disclosure Log
RTI Act 2009

Vegetation Management Options

Timelines, risks and regulation of what can be delivered by when

Summary: **Announcement on week of 18 December 2017** will increase the potential criticism of government due to possible system failure and no staff to answer calls due to Christmas closure. Risk of clearing of vegetation proposed for regulation will be minimised. Level of protection over regrowth reduced (through lack of essential habitat)

Announcement on **second week of January 2018** will limit criticism of government due to system failure and answering calls but slightly increase the risk of vegetation proposed for regulation being cleared. Higher level of protection will be possible over regrowth areas (by adding essential habitat)

Date	Version 10 mapping				Risks of clearing	Business risks	Proposed regulated map				Availability	High nature cons value regrowth (Consistent with HNC Network)
	Remnant	Essential habitat (over remnant)	Wetlands	Watercourses			High value regrowth (post 1999 regrowth)	Essential habitat (over regrowth)	Wetlands	Reef watercourses		
Week of 18 Dec 2017	Yes Will add 60,000 ha	Yes Will add 1.7 M ha to protection (existing 2.8 M ha)	Yes Will add 470,000ha to protection (existing 3.6 M ha)	No Existing watercourse mapping only	Reduced risk of clearing in areas of additional /proposed additional regulation	Online map deliver system will crash due to increased downloads (As occurred in past). No staff to take calls from clients. Mapping not tested. Increased risk of legal challenge due to retrospectivity. Subject: RE: 171218_Vegetation Management options risks_table

Adrian,

Adding essential habitat over proposed high value regrowth (assuming that the current Category C self-assessable code would apply retrospectively), would

- prevent clearing for agricultural purposes
- only allow clearing with an exchange area (a type of offset) for extractive industries
- have no effect on any other purpose including thinning, minor infrastructure, encroachment, fodder harvesting and weed control.

There is no option to apply to clear high value or category R regrowth through a development approval. SACS are the only current option to clear regulated regrowth.

A rough estimate of the total area of essential habitat that would be mapped as high value regrowth would be about 40,000 hectares (out of the 665,000 ha total). So the effect on clearing in high value regrowth would be a very small proportion of this the 40,000 ha considering the dot points above.

There would be greater effect on clearing in new essential habitat over remnant vegetation. There would be an additional approx 1.7 million hectares added to the map over remnant.

Clearing essential habitat under existing remnant SACs is:

- prevented for agricultural purposes, extractive industries, fodder harvesting
- allowed for native forest practice, thinning, encroachment, minor infrastructure and weed control.

A change proposed to the new Thinning SAC is to prevent clearing in essential habitat. So once is in place it will have a larger impact.

Where Landholders can't use the SACs, they can apply for a development approval through SARA to be able to clear. For a development approval to be issued over essential habitat, an offset is generally required where clearing involves total removal of veg.

Wetlands are a much smaller increase and therefore effect (ie 470,000 ha increase to the existing 3.6 million hectares in remnant vegetation). Clearing is generally prevented in and within a varying buffer distance of wetlands.

Subject: s.73 - Irrelevant inform

Hi Peter,

Do you know if s.73 - Irrelevant ir has a PMAV over his property?

Matthew
