

Transferring ownership of a well or water-related bore

This context diagram shows your notification obligation for the transfer of wells and converted wells.

Note:

- You must notify us before transferring the ownership of a petroleum well or water-related bore to another resource authority holder or a landowner.

Permitted transfers

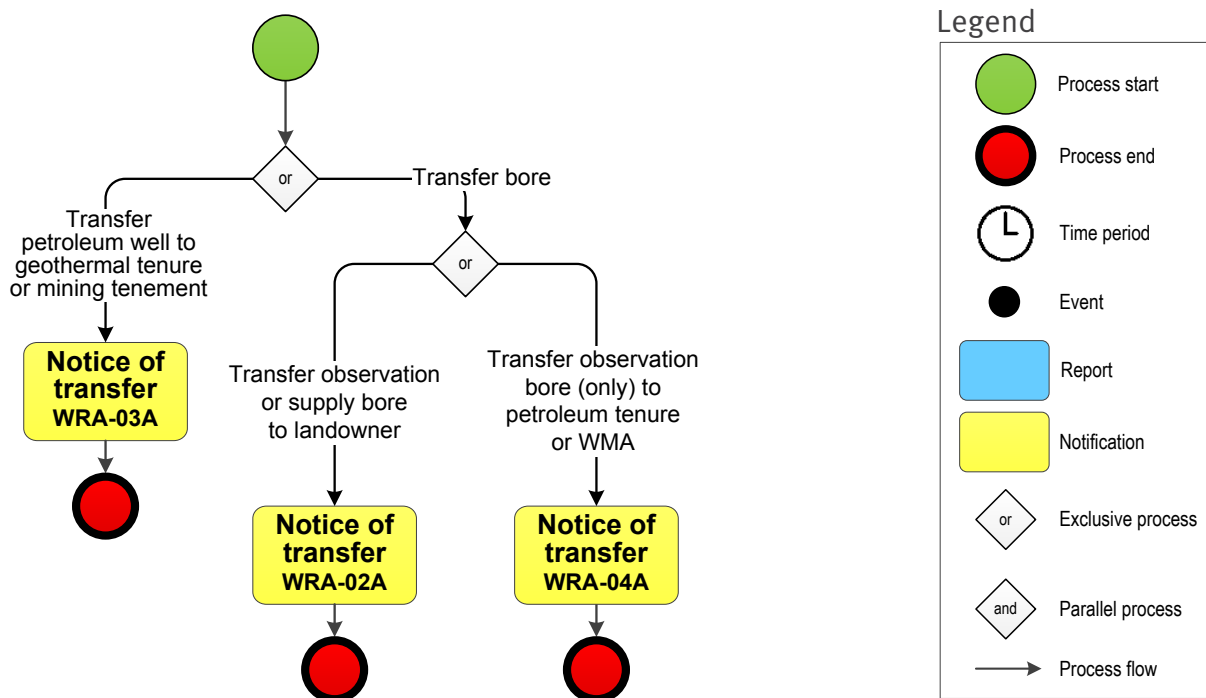

You are allowed to transfer the following types of wells or bores.

Petroleum wells can only be transferred to the holder of a geothermal resource authority, prospecting permit, mining claim, exploration permit, mineral development licence or mining lease if the well is in the area of the transferee’s resource authority. To transfer a petroleum well to a landowner or another petroleum tenure holder, you must first [convert the well to a water-related bore](#), then transfer the bore.

Water supply bores can be transferred to a landowner if the bore is on the landowner’s land.

Water monitoring or observation bores can be transferred to:

- a landowner if the bore is on the landowner’s land
- a holder of an authority to prospect, a petroleum lease or water monitoring authority if the bore is in the area of the transferee’s resource authority.
