

Mineral and coal exploration guideline

The department has developed a series of guidelines to help existing and prospective resource authority holders understand the legislation around the issue of resource authorities, and their responsibilities as a resource authority holder. The guide provides information about these resource authorities and how we apply the *Mineral Resources Act 1989*.

You can use this guideline to help you complete an application for an exploration resource authority for mineral and coal as well as see what information the department requires to complete the assessment of your application. It includes:

- an overview of exploration resource authorities and an explanation of the legislation governing the issue of new exploration resource authorities
- advice on how to prepare and lodge a 'properly made' application, including how to complete forms and what fees are required
- how an application is assessed by departmental staff, including departmental and applicant responsibilities
- contact details for the regions and mining districts in Queensland.

Key information

- The [Mineral Resources Act 1989](#) (the MRA) describes what needs to be done to ensure you fulfil your resource authority obligations. The [Mineral Resources Regulation 2013](#) (MRR) supports the Act, and describes how the MRA's requirements are to be carried out to ensure compliance with your resource authority obligations.
- When assessing your application the department will consider whether to disqualify you from being granted the permit under chapter 7 of the *Mineral and Energy Resources (Common Provisions) Act 2014*.
- The information in this guide will help ensure your exploration resource authority application is processed in the most efficient and timely way and with the least amount of delay or disruption. Applying is as easy as registering for the [MyMinesOnline](#) electronic lodgement system, or downloading and submitting a [paper application form](#).

Managing Queensland's resources

Generally all mineral and coal resources in Queensland are owned by the state. Individuals or companies may apply to explore or extract those resources.

The Department of Natural Resources, Mines and Energy (the department) manages those resources on behalf of the state—by applying a regulatory framework to administer the provisions of the relevant legislation. This legislation provides a way to assess, develop and utilise the mineral and coal resources in Queensland for the benefit of Queensland and its people.

North West Mineral Province

The North West Mineral Province (NWMP) is the highest value mineral province in the state. This region holds potential for world class high value discoveries, especially under areas of younger cover. It is attracting significant exploration investment from major international exploration and mining companies.

To ensure the best outcome for the state, assessment of applications made within the NWMP will be guided by some resource authority management principles that advance the potential of the area through innovation, exploration, discovery and mine development.

Resource authority assessments will be guided by principles that:

1. Provide for, or bring forward mineral project development;
2. Build on mineral inventories or assist in achieving a critical mass to fast-track resource development opportunities;
3. Encourage higher risk exploration that is targeting areas under cover;
4. Encourage exploration targeting emerging commodities or strategic minerals;
5. Support exploration promoting the use of technology or new data to enable rapid assessment of areas; and
6. Facilitate land turnover to achieve better resource knowledge outcomes.

To identify whether your application falls within the NWMP, use the North West Mineral Province layer under the Administration category on [GeoResGlobe](#).

Governance

Mineral resources in Queensland are governed by four tiers of regulation:

- legislation - the *Mineral Resources Act 1993* (MRA) and the *Mineral and Energy (Common Provisions) Act 2014* (MERCPC)
- regulation – the Mineral Resources Regulation 2013 (MRR) and the Mineral and Energy Resources (Common Provisions) Regulation 2016 (MERCPC Reg)
- Practice Manual
- operational policies.

Mineral and coal resource authorities are administered by the department under the MRA and MRR. The legislation:

- encourages and facilitates exploration for and mining of minerals
- improves knowledge of the mineral resources in Queensland
- minimises land-use conflicts that can arise from prospecting, exploring and mining
- encourages environmental responsibility and land care management in the resources industries
- ensures that the state receives a financial return from mining
- provides a framework to manage and regulate prospecting, exploration, and production activities.

These objectives are used when we assess and grant resource authorities. It is done in such a way that ensures best practice, production-oriented, competent exploration and development.

The Queensland Government's uranium policy is that it will not grant resource authorities for the purpose of mining uranium in Queensland, nor will it permit the treatment or processing of uranium within the state.

The full legislation is available online from the [Office of Queensland Parliamentary Counsel](#) website. You can purchase copies of Queensland Acts and Regulations from the [Queensland Government Bookshop](#).

Before you apply

Before starting your resource authority application gather together your personal / contact information and your research results to assist in completing the form. This will ensure that a 'properly made' application is received by the department and that the assessment process will not be held up or your application refused due to missing information.

What is an exploration resource authority?

An exploration resource authority (EP) is a resource authority that allows you to carry out authorised activities on the land to determine what minerals exist and their quality and quantity. It covers any minerals (including coal) in or under land; or in the waters or sea above land. An EP allows exploration activities only (not mining).

EPs are issued under Chapter 4 of the MRA and Part 3 of the MRR.

The application form

This guideline describes the requirements for each step in the process to submit an EP for coal or minerals application. Applicants can use both the online MyMinesOnline form and the paper-based form available from our assessment hubs or on the [department website](#) to lodge their application.

It is important to note that applications submitted as part of a call for tenders process must follow the tender application requirements set out in the call for tender document. The information gathered in MyMinesOnline and on the paper form is the same, however, you may find it easier to use the online form in MyMinesOnline. You will have to undertake a quick registration process before using the system to make an application online. This is so you can submit your details in a secure environment.

Who can apply

The authorised holder or authorised holder representative can lodge an application. A signed *Consent of all holders* form must be provided as part of the application. Refer to Authorised Holder Representative (AHR) guide <https://www.business.qld.gov.au/industries/mining-energy-water/resources/petroleum-energy/legislation-policies/policies-guidelines>

For a project coal EP, a person is eligible to apply if they are a holder of a coal mining lease that is, or is included, in a coal mining project.

Your application

Identification

You can apply using [MyMinesOnline](#) or submit a written application available from our [assessment hubs](#). You can register for MyMinesOnline by visiting the Queensland government's [Business and Industry Portal](#). Select *For Industry > Mining and Resources > Mining Online Services > MyMinesOnline*.

Full *MyMinesOnline* access is granted by providing proof of identity by submitting your ID at your local office or by [emailing certified copies of your ID](#). Alternatively, post your original, certified documents to:

Department of Natural Resources, Mines and Energy - MyMinesOnline
PO Box 15216
City East Qld 4002

Full *MyMinesOnline* system access is granted by verifying two types of identification. Refer to the business industry website for a full list of acceptable forms of ID <https://www.business.qld.gov.au/industries/mining-energy-water/resources/minerals-coal/online-services/myminesonline/register>

Supporting Documents

In addition to proof of identity for each EP holder, you must also provide the department with a number of other documents, which the department has covered in other guides:

- your overall [Work Program](#) rationale and activities to be carried out or outcomes to be pursued for the term of your EP.
- [Financial and Technical Capability](#) statements
- the details of your involvement in any other Queensland resource exploration commitments

A number of supporting documents may also be required to accompany your application:

- proof of identity for an authorised holder representative (if not already a registered user of MyMinesOnline - refer to the *Proof of Identity* section above)
- your rationale for conditionally surrendering any of your existing EPs
- your [Environmental Authority](#) application, including maps of environmentally sensitive areas, and *Registered Suitable Operator* application (both assessed and issued through the [Department of Environment and Science](#))
- Native Title documentation, including any private indigenous land use agreements (ILUA) or details of existing state ILUA native title documents
- QDEX reference details
- private research documents declaring any third parties providing technical expertise.

Applicant details

You must provide the full contact details of the applicants who will be EP holders, including an ACN. If there are two or more holders, one must be nominated as the authorised EP holder. If the applicant is a company, please provide an ARBN, ensuring the company details are exactly the same as the information held by the [Australian Securities and Investments Commission](#).

The following table provides an overview of the holder, authorised holder and authorised holder representative structure. Current legislation allows co-ownership of mining resource authorities by two or more people or companies as either *tenants in common* or as *joint tenants*. **Unless otherwise specified, *tenants in common* is the default co-ownership structure.**

Tenants in common allows two or more companies and/or individuals to hold separate and distinct proportional EP shares. In the case of individuals, the right for an EP holder to leave EP interests to beneficiaries upon their death is in accordance with the directions in their will: that is, it does not pass automatically to the remaining tenant/s in common.

Joint tenancy is commonly held by individuals owning equal EP shares. When a joint tenant dies, the EP share automatically passes in equal proportion to any surviving holder/s. Joint tenants must hold an equal share in the EP (for example, 50% each if two or 25% each if four tenants etc.) but unlike *Tenants in common*, a will does not override joint tenancy.

An **authorised holder (AH)** is the individual or company authorised to liaise with the department about a registered EP. In the case of individuals being sole holders, that person will be the authorised holder representative, unless an agent is nominated to act on their behalf.

Authorised holder representatives (AHR) are those people or parties nominated by the company (an agent or individual in that company).

Multiple holders must nominate a person from one of the holder companies, or an agent company, to act on their behalf. A *Letter of Authority* signed by the holders needs to accompany the application to indicate that permission has been given.

All of the details and requirements for your *Letter of Authority*, including a template to help you prepare this document, are outlined in the department's [Authorised holder representative guide](#) and [Letter of authority template](#).

Resource Area Selection

Area Description

Note: this section does not need to be completed for applications under a call for tender process. Tender areas have already been determined as per the call for tender document.

If applying via MyMinesOnline or via hard copy lodgement at DNRME offices the following applies:

EPs are applied for and granted over blocks and sub-blocks. These blocks and sub-blocks have been approved by the chief executive in Block Identification Maps (BIM) Series B. These are identified by reference to the latitudes and longitudes defined in the Australian Geodetic Datum 1966 (AGD66).

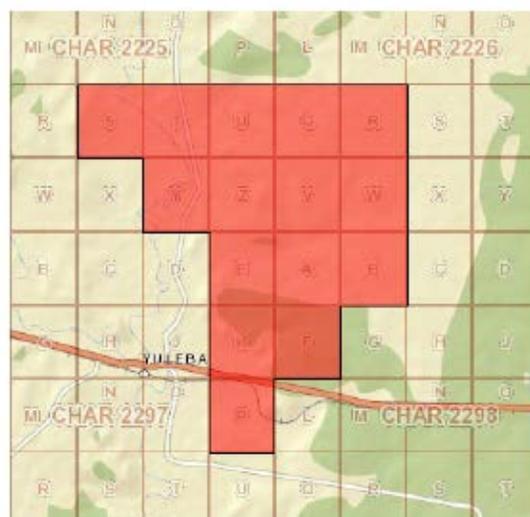

You can access the BIM link here: <https://data.qld.gov.au/dataset/queensland-mining-and-exploration-administration-series>

- each BIM has a unique name and contains 3456 blocks, which are numbered in sequence.
- each block is approximately 75 square km in area and each sub-block is approximately 3 square km in area - the exact size of the block depends on curvature of the earth.
- each block is divided into 25 sub-blocks, which are identified in alphabetical order (with the exception of the letter "i").
- each block equals five minutes of latitude by five minutes of longitude and sub-block equals one minute of latitude by one minute of longitude.

For example, the exploration resource authorities shown below (highlighted in red) is located within the Charters Towers BIM. It covers:

- block 2225, sub-blocks s,t,u,y and z
- block 2226, sub-blocks q,r,v and w in,
- block 2297, sub-blocks e,k and p
- block 2298, sub-blocks a,b and f.

In the application, these would be listed (using the first block and sub-block as an example) as CHAR 2225 sub-block "s".

Generally applicants will use the department's online spatial system to review the areas that are available for application and to research past resource authorities and geological information for the area. You will need to ensure that you have given regard to the constrained land layer and other restrictions. See Operational policy 7/2012: *Prescribed areas (excess and non-contiguous)* before finalising your blocks and sub-blocks for application.

Land size and availability

Land Availability

All land can be subject to an EP application, with the exception of:

- national parks and dedicated conservation zones;
- areas where exploration is expressly prohibited (Crown Land where an Act excludes mining, for example);
- restricted land;
- moratorium land; or
- existing resource authorities.

National Parks

Section 27 of the *Nature Conservation Act 1992* lists areas where mining and exploration is prohibited in order to protect National Parks and other zones identified for conservation.

Moratorium Area

The area within an EP which has been surrendered, abandoned, relinquished or expired¹, or an application that has been withdrawn² will enter a moratorium period for at least 2 calendar months from the date it became non-current. EP applications are not permitted for the same mineral over this land until it is released from moratorium.

Existing EPs

Land within a granted EP for the same mineral is unavailable for application, however a coal EP can overlap a mineral EP.

An EP may overlap land within an existing resource authority (application for a mining claim, mining lease, or mineral development licence, or granted mining claim, mining lease, or mineral development licence) however the land will be excluded at grant³ If the resource authority later becomes non-current, the land can be added back into the area of the exploration resource authority.⁴

Land within an existing undecided application is unavailable unless the application is for a different mineral (including coal), or the current holder conditionally surrenders a granted EP over the same area in favour of a new EP in the same name, for the same resource.

Additional provisions include overlapping land for some resource authority types, Priority Agricultural Areas, Priority Living Areas, Strategic Environmental Areas, Strategic Cropping Areas or declared high preservation areas.

¹ Section 131(1)(b) MRA

² Section 131 (1)(c) MRA

³ Section 132(1) MRA

⁴ Section 132(2) MRA

Size restrictions

EPs for coal

- cannot exceed 300 sub-blocks (tender), or
- 6 sub-blocks (for project related application);

EPs for minerals

- 100 sub-blocks.

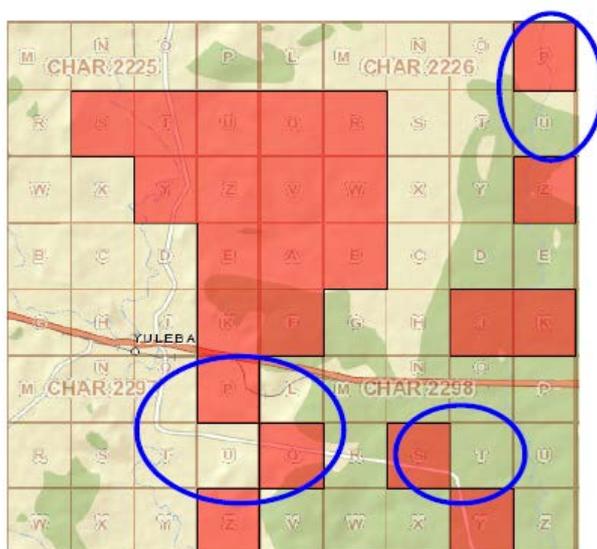

If your EP application exceeds this maximum area, a statement outlining why you are requesting extra land must be submitted for Ministerial approval. Online applications should include this document as part of *Step 4: Land Availability Report*.

Sub-block applications over urban, residential or town land must include a work program clearly demonstrating how the applicant will minimise any land use conflicts in these specific areas before such applications may be considered.

Land without a common boundary or non-contiguous boundaries

Each sub-block in your application must adjoin at least one other sub-block (contiguous land). EPs may still be granted for sub-blocks with non-contiguous boundaries if the Minister is satisfied the proposed work program is consistent with competent and efficient mineral exploration practices. Applications with non-contiguous sub-blocks must therefore include a detailed work program outlining how the proposed work will be carried out.

Below is an example of an EP with non-contiguous sub-blocks and without a shared common boundary. Note that only blocks with corners touching are considered non-contiguous.

Land constraints

You must ensure that the land for which you are applying is unencumbered and can be entered without restriction for the purposes proposed in the resource authority.

Overlapping resource authorities include existing resource authorities that intersect your application. The ability to proceed with the application therefore depends on the type and extent of

resource authority overlap. However, where legislation prohibits overlaps, this area will be excluded from your EP application area, should it be accepted.

Unavailable land is generally excluded from applications, even though *MyMinesOnline* won't prohibit an application being submitted over this type of restricted land. However, this area will be removed from your EP application area should the department accept your application. While unavailable land is generally exempt, there are some specific circumstances (where an applicant wishes to conditionally surrender an existing EP in favour of another application, for example) where an application over unavailable land may be accepted.

Constrained land has conditions limiting certain exploration or production activities. Areas of constrained land do not have to be identified on your application, but it is important to be aware that constraints may impact the range of activities you will be permitted to undertake.

Restricted Areas are listed with areas of constrained land, even though in many instances, applications will not be accepted over restricted areas. For these, you may be able to apply for a higher form of resource authority (such as a mining lease).

Conditional surrender

If you are applying to conditionally surrender part or whole an existing EP in favour of a new one. The application must be in the same names as the surrendered EP and completely surrendered in the area of the new EP. Only a single conditional surrender will be considered for any EP or set of EPs, and no conditionally surrendered EP may be incorporated into further (bulk) conditional surrenders.

Environmental authorities and native title

Environmental authorities in relation to mining and resource activities are assessed by the [Department of Environment and Science](#) (DES), which administers the [eligibility criteria and standard conditions](#). DES will provide an EA number, required by the Department of Natural Resources, Mines and Energy to confirm the EA has been issued before granting your EP.

Once technical assessments and native title processes are complete the department will advise you of any outstanding accounts (rent, security or financial assurances, for example). You have 20 business days from the date of the department's letter to finalise these accounts.

Native title is also assessed independently by the department's own specialist teams. Please visit the [Native Title Hub](#).

Work programs

Your work program provides DNRME with a detailed summary of the activities you propose to carry out for an activities-based work program or the outcomes you propose to pursue for an outcomes-based work program, for the term of your EP. Your proposed work program should relate to the rationale and geological model developed for the proposed EP area. Focusing your data collection on exploration activities, contributing to the area's resource knowledge will also help you determine its resource potential and status.

Financial and technical capability

Financial and technical capabilities of holders need to be understood to ensure any planned activities are sufficiently funded and adequately resourced.

The onus is on applicants to demonstrate how the financial and technical capability and commitments for the EP will be met. Provision of funding and technical resources may be shared across multiple holders, or one holder may assume the majority of responsibility for one or the other.

To address these requirements, applicants need to supply a financial and technical capability and commitment documentation, as well as the appropriate evidence details below.

Evidence requirements for financial and technical capability

If an applicant with financial or technical responsibilities for the EP has over five year's history as an EP holder in Queensland, they may utilise their history together with a statement as evidence to support this application.

If an applicant with financial or technical responsibilities does not have five years history as an EP holder in Queensland, or prefers not to rely on past performance, they must attach additional supporting evidence proving their ability to uphold their responsibilities.

In addition, if you are using any third party contractors for the technical aspects of the work, you will need to attach a statement from the third party, outlining what services they will be providing.

| History | Financial documentation | Technical documentation |
|----------------------|--|---|
| More than five years | <ul style="list-style-type: none"> financial capability statement financial commitments document | <ul style="list-style-type: none"> technical capability statement technical commitments document third party declaration (if applicable) |
| Less than five years | <ul style="list-style-type: none"> financial capability statement financial commitments document supporting evidence of financial capability (see list below) | <ul style="list-style-type: none"> technical capability statement technical commitments document third party declaration (if applicable) supporting evidence of technical capability (see list below) |

For more information, please review our full [Financial and Technical Capability Guide](#).

Understanding your resource authority holder obligations

Your EP holder obligations are generally listed:

- on the *Instrument of Grant* as mandatory resource authority conditions
- outlined in the legislation governing your resource authority
- attached to the environmental authority issued by the [Department of Environment and Science](#).

A summary of the most common EP [holder obligations](#) are outlined on the website.

Application steps for MyMinesOnline

| What you need to do to apply | Supporting information |
|---|---|
| <p>Log in to <i>MyMinesOnline</i>, select <i>Apply for a new permit or renew a permit</i> under the <i>I want to...</i> options at the right of the <i>My dashboard</i> tab and select <i>Enter a new permit application</i>. Information on <i>Resource Authority</i> types and the relevant forms are also available to download</p> <ol style="list-style-type: none"> If you agree with the <i>Terms and Conditions</i>, select Continue and use the drop down boxes to select the <i>Resource Type</i> either mineral or coal and the <i>Permit Type</i> you are applying for, select Next <p>Note: At this stage the system creates the new application. This may take a few moments. You need to wait until the screen displays with the link <i>Continue to your application</i>.</p> <ol style="list-style-type: none"> Select the <i>Continue to your application</i> link Once created, the steps to follow for the new permit application display in the <i>Application status summary</i> table if completing the steps online. Complete each step as described in the summary. The status of each step displays once details are completed. Some steps will not be available until a preceding step is completed. Select Step 1. | <p>Note: MyMinesOnline works best in Internet Explorer</p> |
| <p>Step 1: Permit details</p> <p>From the Application status summary table or form, select Step 1: <i>Permit details</i></p> <ol style="list-style-type: none"> Enter the Permit Name (for your reference only as it will not be used by the Department) Specify the term of the proposed permit. The maximum term that may be granted is 5 years. Provide the general locality of the application by a brief description of the general area, for example, 15km South East of Mt. Isa. This description will be used in the native title advertising process, if required Select Save <p>Note: After each step, the system refreshes to display the status.
